DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.
3. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

(d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.

(e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A
COMPACT DISC.

(f) BACKGROUND OF THE INVENTION.

(1) Field of the Invention.

(2) Description of Related Art including information disclosed under 37
CFR 1.97 and 1.98.

(g) BRIEF SUMMARY OF THE INVENTION.

(h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(i) DETAILED DESCRIPTION OF THE INVENTION.

(j) CLAIM OR CLAIMS (commencing on a separate sheet).

(k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A

“Sequence Listing” is required on paper if the application discloses a
nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if
the required “Sequence Listing” is not submitted as an electronic
document on compact disc).

4. The title of the invention is not descriptive. A new title is required that is clearly
indicative of the invention to which the claims are directed.

Drawings

5. The drawings are objected to because lines are not thick, durable, and black. Lines are in a poor quality. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Bowers (U.S. Patent No. 6,392,634).

As to claim 1, Bowers discloses a device (10) for giving an already existing electronic device (laptop) an auxiliary function as a pointing device (30), characterized in that at least one or more pointing components are integrated in the electronic device (52a), thus enabling it to act together with an external electronic screen device (24), which makes use of the pointing device (col. 4, lines 35-38).

As to claim 2, Bowers teaches the electronic device's (10) already existing optical or radio transmission means (30), (col. 6, lines 62-64) are utilized for wireless connection (90) to the electronic screen device (col. 7, lines 36-38).

As to claim 3, Bowers teaches the pointing device (30) components comprise at least one of the following components: a mechanical or optical reader (70 and 76, see Fig. 5), a button element (50) and a scroll wheel (52a).

As to claims 4 and 7, Bowers teaches the pointing device components (52a) are integrated in an auxiliary unit (30), which is releasably mounted to the electronic device (col. 4, lines 11-13) in such a manner that the auxiliary unit can be released and act as

a pointing device separately therefrom (Fig. 6, device 30 is released from recess 58 and is used separately).

As to claims 5 and 8, Bowers teaches the auxiliary unit (30) comprises optical or radio transmission means (90, col. 6, lines 62-64) that permit wireless connection to an electronic screen connection (col. 7, lines 36-38).

As to claims 6 and 9, Bowers teaches the auxiliary unit is a battery pack (Unit 30 can be used wirelessly, which means in order for the device to work there must be a battery pack inside the device).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Oross (U.S. Patent No. 6,590,563) teaches a pointing device having two parts.

Yin (U.S. Patent No. 6,784,870) teaches a portable computer system including detachable peripheral device and combined mouse/joystick.

Miyashita (U.S. Patent No. 6,909,906) teaches an input apparatus is detachably coupled to the portable device and is provided with a coordinate information generator for generating coordinate information depending on a movement on a flat surface to control a position of a cursor on a display of the portable device.
